# 1 Development Board Introduction

RAK411 Series development board is used to evaluate the SPI function. SPI supports four-wire mode, and optional interrupt INT pin. The peripheral circuit of RAK411 is quite simple, requiring few devices. Development board also supports an interface for testing module power consumption.

The hardware resources needed for Development board are shown as Figure 1-1:

Figure 1-1: Development View

Table 1-1 Major peripheral hardware connection Diagram

Function	Name	Description
External Interface	Mini USB / DC5V	Power Supply, 5V DC input
Button	Reset	Module reset button
Pin out	P1	Pin Reset and Pin Link
	P2	SPI Interface, refer to print detail for interface order
Power consumption Pin	J1	Power Consumption Interface
LED Indicator	LED1	Power Indicator
	LED4	Link Indicator
